XTEND CEO – Mr. Aviv Shapira

XTEND Activities with IMOD, IDF and DDR&D

1. The State of Israel, through the Directorate of Defense Research and Development (DDR&D), at the Ministry of Defense, has been purchasing drones for various purposes from your company since 2018.
2. The systems developed by your company provide a solution to critical needs, such as persistent surveillance, enhancing survivability and tactical reconnaissance among additional operational capabilities.

The systems provide much needed support for the combat operator, generating forward observation without endangering the warfighting team, including entry into hostile confined environments ahead of human fighters. These systems are life saving for Israeli soldiers and can assist in facilitating successful missions.

We greatly appreciate the company's efforts to meet the enormous demand of various units in the field (especially Special Forces engaged in close combat with the enemy).

3. In these challenging days, when the State of Israel is at war with the terrorist organization Hamas, the operational efficiency of the drones produced by your company have been critical for operational success.

Respectively, your company will receive an order a significant amount of systems in the next few days in accordance with what will be concluded between the operational team and the project officers in DDR&D.

We appreciate your participation in supporting this effort to significantly increase the amount of systems in the coming contract for our forces.

With Great Respect,

Dr. Daniel Gold

Head of DDR&D
